

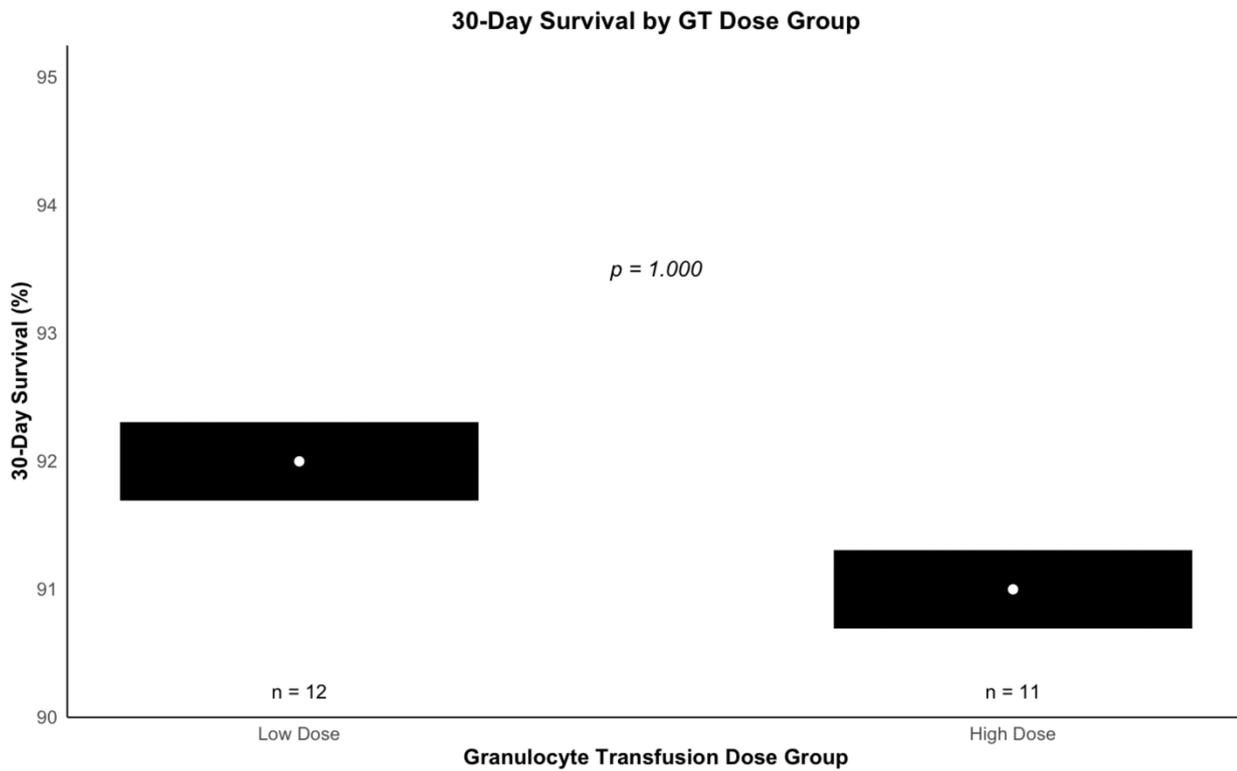

Figure S11. 30-day survival outcomes stratified by granulocyte transfusion (GT) dose group

Box plot comparing 30-day survival in patients receiving low-dose ($< 0.1727 \times 10^{10}$ cells/kg) versus high-dose ($\geq 0.1727 \times 10^{10}$ cells/kg) granulocyte transfusions. Survival rates were similar between groups (92% vs 91%, $p = 1.000$).
