

Table S22. 30-day survival by granulocyte transfusion (GT) dose group

GT dose group	Survived n (%)	Died n (%)	Total n (%)	p-Value
Low Dose (<5.2 x 10 ¹⁰ cells)	11 (92)	1 (8)	12 (100)	1.000
High Dose (≥5.2 x 10 ¹⁰ cells)	10 (91)	1 (9)	11 (100)	
Total	21 (91)	2 (9)	23 (100)	

Abbreviations: GT, granulocyte transfusion.

High-dose and low-dose granulocyte groups were defined using the median cumulative dose of 0.1727×10^{10} cells/kg per patient. No significant difference in 30-day survival was observed between groups.
