

Table S7. Survival outcomes at 14, 30, and 90 days stratified by granulocyte transfusion and antimicrobial resistance pattern

Subgroup	Timepoint	GT survival n (%)	No GT survival n (%)	Fisher's exact p-value
MDR (n = 10)	14-day	8/8 (100)	1/2 (50)	0.200
	30-day	7/8 (88)	1/2 (50)	0.378
	90-day	6/8 (75)	0/2 (0)	0.133
Non-MDR (n = 11)	14-day	5/5 (100)	5/6 (83)	1.000
	30-day	5/5 (100)	3/6 (50)	0.182
	90-day	2/5 (40)	1/6 (17)	0.545

Abbreviations: GT, granulocyte transfusion; MDR, multidrug-resistant.
