

Supplementary Table 1. Tumor lysis syndrome characteristics and biochemical profile according to Cairo–Bishop classification and induction AKI status

Variables	TLS without AKI (N=16)	TLS with AKI (N=19)	<i>P</i> value
Day of induction at TLS onset	2 (1–5)	2 (1–4)	0.76
Day of induction at AKI onset	-	2 (-1–9)	-
AKI duration (day)	-	24 (20–31)	-
Peak serum uric acid (mg/dL)	8.1 (6.6–9.7)	10.5 (7.3–13.8)	0.07
Peak serum phosphate (mg/dL)	7.0 (6.4–7.7)	7.0 (6.6–8.3)	0.44
Peak serum potassium (mmol/L)	5.8 (5.7–6.0)	5.9 (5.5–6.5)	0.70
Lowest serum calcium (mg/dL)	7.1 (6.6–7.3)	6.7 (6.2–7.5)	0.40

Values are presented as median (interquartile range).
 AKI, acute kidney injury; TLS, tumor lysis syndrome.
