

Supplementary Table 1. Comparison between the genotyped patients and the hospitalized MPP patients

Characteristic	MPP patients (n=3,060)	Genotyping patients (n=137)	$t\chi^2$	P value
Age (mo)	74.59±31.03	71.77±33.94	0.95	0.342
Male sex	1,653 (54)	70 (51.1)	0.45	0.500
Severe MPP	982 (32.1)	58 (42.3)	6.27	0.012
Not from 2023-2024 outbreak	640 (20.9)	26 (18.9)	0.30	0.585

Values are presented as mean±standard deviation or number (%).

MPP, *Mycoplasma pneumoniae* pneumonia.

Boldface indicates a statistically significant difference with $P<0.05$.
