

Supplementary Fig. 1. Levels of neutrophil extracellular traps markers and deoxyribonuclease I (DNaseI) in plasma of patients with hematological and solid tumors according to risk. (A) Calprotectin. (B) Cell-free DNA (cfDNA). (C) Neutrophil elastase. (D) Citrullinated histone 3 (CitH3)-DNA complexes. (E) DNaseI. Only significant comparisons within the same tumor type, between similar risk groups or with controls are depicted. HR, high-risk; LR, low-risk. * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$, **** $P < 0.0001$.
