

Supplementary Fig. 7. Representative false alarms incorrectly identified as seizures by our detection model. Panels A and B represent seizure-like evolution confined to one electrode in the SNUBH09 and chb13, respectively. Panel C represents high voltage muscle artifacts in the chb13. Panel D represents rhythmic chewing artifacts in the SNUBH09. Red-colored vertical dashed lines represent model-generated ictal intervals, along with detected channels and intervals (red-colored channel names and signals). SNUBH, Seoul National University Bundang Hospital.
